If your screening test result is positive, this means that you might have a COVID-19 infection. Here’s what you need to do:

#1 Report to HealthLine 811
You will need to report to HealthLine 811 that your screening test was positive. It is very important that the diagnostic test be done for their health as well as to put in safety measure to keep your family safe from further spread.

#2 How to arrange for a second test
To arrange for a second test, when you call HealthLine 811 they will set up an appointment at one your local assessment sites or use a drive-thru test site to confirm the diagnosis of COVID-19.

#3 Self-isolate immediately
Anyone who tests positive is required by the law under the Public Health Act to start to self-isolate immediately to stop the spread of COVID-19 to others. We know that this is hard, and can present difficulties, but it is the best thing you can do to protect the health of your family, friends and community.

#4 Create a contact tracing list
Please start making a list of where you have been and who you have been in contact with over the past 14 days to help Public Health.

If you don’t have any symptoms, it is important that you self-monitor or watch closely for any symptoms in yourself or the other people in your home.

- If you have a thermometer, take your temperature twice a day to see if you develop a fever
- Other symptoms to monitor include cough, chills, difficulty breathing or shortness of breath
If your screening test result is **positive**, this means that you might have a COVID-19 infection.

Because you tested positive, you need to complete the following:

1. **Report to HealthLine 811**
   You will need to report to HealthLine 811 that your screening test was positive. It is very important that the diagnostic test be done for their health as well as to put in safety measures to keep your family safe from further spread.

2. **How to arrange for a second test**
   To arrange for a second test, when you call HealthLine 811 they will set up an appointment at one of your local assessment sites or use a drive-thru test site to confirm the diagnosis of COVID-19.

3. **Self-isolate immediately**
   Anyone who tests positive is required by the law under the Public Health Act to start to self-isolate immediately to stop the spread of COVID-19 to others. We know that this is hard, and can present difficulties, but it is the best thing you can do to protect the health of your family, friends and community.

4. **Create a contact tracing list**
   Please start making a list of where you have been and who you have been in contact with over the past 14 days to help Public Health.

If you don’t have any symptoms, it is important that you self-monitor or watch closely for any symptoms in yourself or the other people in your home.

- If you have a thermometer, take your temperature twice a day to see if you develop a fever
- Other symptoms to monitor include cough, chills, difficulty breathing or shortness of breath
