

### **If any member in your home has a negative self-test (one red line [C]), please remember:**

- This self-test is only based on the moment in time when you were tested
- It doesn't tell us anything about the future and it doesn't mean you can't get COVID in the next few days or even hours

**It is important that you watch closely for any COVID-19 symptoms to develop in yourself or in any other members of your home.**

**If you do develop any COVID-19 symptoms, it is important that you stay home and call HealthLine 811 to arrange for a lab test (PCR test).**

**Provincially supplied negative self-tests (rapid antigen tests) will not be accepted as valid proof of negative COVID-19 test results. However, self-tests purchased through a private licensed lab service provider or a user-paid monitored testing program will be accepted.**

Please consider downloading the FREE COVID alert app onto your cell phone.

The app is:

- A tool to know if you've been exposed to COVID-19 and
- Without revealing any personal information, it lets others know that they may have been exposed as well
- The app is most effective if it's downloaded before receiving a positive test result
- The app can be found on the Apple App Store or Google Play

There are other important and effective tools we can all use daily:

- Become fully vaccinated against COVID-19 if you are eligible
- Remember to wash your hands often
- Keep a safe physical distance from others
- Wear a mask when you are in public spaces
- Stay home if you feel unwell
