

"The last skeletons were not a single vertebra of colored dinosaur but a dense set of pieces requiring thousands and even millions of years."
Robert T. Bakker, paleontologist

...an enormous mass extinction
did follow the impact, and we
understand some of the
worse global disasters
were secondary results
of impact."
Walter Alvarez,
geologist

"The last extinction was not
a single event of global
disaster but a series of
events spanning thousands
and even millions of years."
Bryan & Rosen
paleontologists

...an enormous mass extinction did follow the impact, and we now understand some of the longer-term global disasters which were secondary results of the impact.
WALTER ALVAREZ, geologist
