

SPRING RUNOFF POTENTIAL AS OF FEBRUARY 01, 2014

Above normal precipitation prior to runoff and/or a faster than typical rate of melt will result in significantly higher runoff.

In many areas conditions vary considerably over short distances.

Projected runoff is based on sparse, variable and often conflicting snow accumulation estimates.

Runoff boundaries should be considered approximate.

LEGEND

POTENTIAL RUNOFF

- Near Normal
- Above Normal
- Well Above Normal

WSA prepares maps with varying degrees of accuracy and completeness dependent on the circumstances and available data. WSA makes no representation that this map will be sufficient for all uses. The user is advised to confirm the information contained herein in the event that precision and currency of data are required.
